## Why an Aqua-bois pool?

Located in Boucherville, AQUA-BOIS is a manufacturer of wooden pools, offering also installation services. Founded in 2000, it specialises in the fabrication and installation of wooden pools.

A survey conducted toward clients that bought an AQUA-BOIS pool revealed three major reasons to justify their investment in this product:

- the undeniable quality of the product that offers a solid resistance to our extreme weather conditions; you will never see an AQUA-BOIS pool open, split or crumble under the weight of ice or snow, causing tremendous amount of damages and major worries. Our pools are guaranteed 15 years.
- The AQUA-BOIS pool increases the property value with a product aesthetically far superior that blends perfectly with your landscaping, creating this peace oasis you always dreamed of.
- The AQUA-BOIS pool is a versatile product that can be designed to fit in almost every yard .

AQUA-BOIS is an economic choice compared to in-ground pools and a sound investment to conventional above-ground pools.

## Aqua-Bois, a superior product

Here are some key elements to consider when making your decision as to what type of pool to choose:

- the AQUA-BOIS pool is not only resistant, it also offers the highest certifications required by the Province of Quebec
- our liners and pools are in inventory, we promise fast delivery
- AQUA BOIS wooden pools are the only ones manufactured with treated red pine. Did you know these treated wooden pools have been successfully installed in Quebec for more than 30 years?
- versatile, the AQUA-BOIS pools can adapt to almost every yard; we can fabricate pools almost made to measure to be able to fit in smaller yards. Our personnel are equipped with the proper machinery to make sure we can access yards with limited space.
- Rest assure that AQUA-BOIS offers an excellent after sale service, accessible and efficient. Our specialists can install your pool (Greater Montreal area) or recommend certified experts elsewhere.

## - Insist on getting the manufacturer wood stain option performed by professionnals in optimum conditions

Do not hesitate to compare, it will convince you that AQUA-BOIS is a logical choice and a rational investment in terms of a quality/price ratio.

**an ecological choice!**

Wood is a renewable resource that requires little energy for production; it also possesses insulating properties far superior to those of steel. Furthermore, its lighter weight for transport contributes to the reduction of greenhouse effects.

The natural high temperature treatment of the torrefied wood in the Amazone product line, uses no chemical products and the heating process releases no waste into the atmosphere.

The synthetic treatment of the Boreale product line does not contain arsenic and is approved by Health Canada.

Finally, we use a acrylic wood stain with a low content of VOLATILE ORGANIC COMPOUNDS (VOC), a healthy product beyond actual requirement and regulation.

## the Boreale

Among the products offered by Aqua-Bois, the Boreale model cannot be ignored in terms of style and quality. Especially attractive in the semi-in-ground model, the Boreale product line is both rugged and elegant. Designed to resist winter conditions, it will not crumble under the weight of snow or black ice.

The structural panels of the Boreale product line are made of red pine, a wood that easily absorbs and holds synthetic preservatives. All wood panels and components are treated with ACQ after cutting and molding for a uniform application. This copper-based pressurized treatment, approved by Health Canada, ensures that the pool be thoroughly protected from termites and fungal decomposition.

## the Amazone

Add a touch of elegance and distinction to your landscaping with the Amazone product line.

The wood used in manufacturing the Amazone product line has undergone an innovative and ecological treatment: wood torrefaction. This technology, developed in Europe, consists of heating the wood at an extremely high temperature in order to modify its molecular structure and extract the nutritive elements. This technology gives great stability, an increased resistance to deterioration and even an exotic coloring to the torrefied wood.
